

Reconstructed Prompt: Developer Portfolio Website

Submitted by Nnamdi (Peter Ilele) — BiP-60 Programme

Note on reconstruction: The original chat session in which this project was built was accidentally deleted. The prompt below has been reconstructed by analyzing the final codebase (HTML, CSS, JavaScript, README, and commit history) in the project's GitHub repository. It is not the verbatim original prompt, but a faithful reconstruction of the request based on what was actually built.

Prompt

Help me build a personal developer portfolio website from scratch using HTML5, CSS3, and vanilla JavaScript — no frameworks, no templates. This is for my #BiP60 Build in Public challenge as a trainee in the Enugu State Government tech programme (Turing Tech LLC), so it should represent where I am right now as a full-stack developer in training.

Design

Dark theme — near-black background (#0d0d0d) with a gold accent color (#e8c547). Use Bebas Neue for headings, Lato for body text, and JetBrains Mono for code-style labels. Use Remix Icons for social and contact icons.

Sections

- Home — hero section with a typewriter effect on my name/title and CTA buttons
- About — background story and programme context
- Skills — current stack and learning roadmap
- Projects — cards with tags, links, and status indicators (Completed / In Progress)
- Contact — working form plus direct contact details

Features

- Fully responsive (mobile, tablet, desktop) with a mobile-first CSS scale
- Sticky navbar with a hamburger menu on mobile
- Smooth scroll navigation
- Scroll-triggered fade-in animations using Intersection Observer
- Downloadable resume (PDF)
- Accessible markup — semantic HTML, ARIA labels, aria-expanded on the hamburger

Projects to feature

Trainee Feedback Survey Form (HTML/CSS), Tailwind CSS Landing Page, and MamaPutOnline (HTML/CSS/JavaScript).

Hosting

Host it on GitHub Pages.

Reconstructed from the project repository at github.com/nnamdi-security/portfolio (README, commit history, and source code), July 2026.
